Author Index for Volume 231 379

Notice to Authors

The chief purpose of *Experimental Cell Research* is to promote the understanding of cell biology by publishing experimental studies on the general organization and activity of cells. The scope of the journal includes all aspects of cell biology, from the molecular level to the level of cell interaction and differentiation. While it is recognized that a variety of cell types, tissues, and organisms provide the experimental materials for cell research, the journal does not include within its scope those investigations whose results are more specifically of morphological, histological, pathological, pharmacological, and microbiological interest, nor those which are concerned with biochemical mechanisms per se. The relevance of the aims and results of the contributions to the universal attributes of cells will be the foremost consideration in the evaluation of papers. A manuscript of high intrinsic quality may be returned if it seems better suited to a more specialized journal.

Examples of areas of research that fall within the scope of ECR are: physical and chemical aspects of cellular and intercellular structure, biosynthesis with reference to cell growth, reproduction and differentiation, mechanism of meiosis and mitosis, cell cycles, membrane function, motility, interactions between cells in tissues or in culture, modulations in cultured cells, environmental relations and adaptations, interactions between genome and cytoplasmic factors, functional role of subcellular particles, energetic aspects of cell structure and function, control and regulation of cellular processes.

Reports of original methodological or theoretical work having a direct bearing on the experimental approach are welcomed.

Acceptance of manuscripts will be based on scientific merits as judged by editors and referees, on relevance to the central purpose of the journal, and on the interest of the results to a broad readership of cell biologists.

Original papers only will be considered. Manuscripts are accepted for review on the understanding that the same work has not been published, that it is not under consideration for publication elsewhere, and that its submission for publication has been approved by all of the authors and by the appropriate authority at the institution where the work was carried out. Authors must verify the wording of any cited personal communication with the persons who supplied the information and obtain approval for the use of their names in connection with the quoted information or for the citation of unpublished work; written evidence of such approval should accompany the manuscript. All material published in *Experimental Cell Research* represents the opinions of the authors and should not be construed to reflect the opinions of the Editors or the Publisher.

Authors are invited to suggest competent reviewers in their field and may also suggest individuals whom they wish to have excluded from the review process.

Short Notes. Shorter communications, running to 2000 words, inclusive of tables, illustrations with captions, and references will receive priority. One printed page of main text contains about 500 words.

Special Articles and Reviews are invited papers for which special rules apply. Authors interested in contributing this type of article should contact the Editor-in-Chief before submitting a manuscript.

Submission of Manuscripts. *Four complete copies* should be sent to one of the Editors or to either journal receiving office:

Editorial Office
Experimental Cell Research
Karolinska Institutet
CMB, Doktorsringen 2 D
17177 Stockholm
Sweden

Dr. Renato Baserga
Associate Editor for North America
Experimental Cell Research
U.S. Editorial Office
525 B Street
Suite 1900
San Diego, California 92101-4495

Each copy must include all figures (originals or glossy prints must be supplied with three copies, photocopies may be supplied with the fourth) and tables. *In the case of rejected manuscripts only one copy of the manuscript and the original art will be returned to the author.*

Gene sequences should be simultaneously submitted to a gene databank. Novel cell lines described in the article should be made available upon request to all qualified members of the scientific community for research purposes.

Form of Manuscript. Manuscripts should be typewritten and double-spaced throughout on one side of 8.5 × 11-in. white paper, with 1-in. margins on all sides. All pages should be numbered consecutively. *Page 1* should contain the article title, author(s), affiliation(s), a short running title (abbreviated form of title) of less than 55 characters including letters and spaces, and the name and complete mailing address (and telephone number and fax number if possible) of the person to whom correspondence should be sent. *Page 2* should contain a short abstract of 50–250 words.

In the Methods section, authors should draw attention to any particular chemical or biological hazards that may be involved in carrying out the experiments described. Any relevant safety precautions should be described; if an accepted code of

practice has been followed, a reference to the relevant standards should be given.

Footnotes should be avoided.

Figures should be numbered consecutively with Arabic numerals in order of mention in the text: each figure should have a descriptive legend. Legends should be typed together on a separate sheet, double-spaced. All illustrations should be in finished form suitable for photoreproduction. They should be planned to fit the proportion of the printed page ($7\frac{1}{8} \times 9$ in.; column width, $3\frac{1}{2}$ in.). Mark the back of all illustrations (in *soft* pencil) with the author's last name, title of paper, and figure number, and indicate the TOP side of the illustration.

Drawings. A convenient size for drawings is $8\frac{1}{2} \times 11$ in. (21 $\times$ 27.5 cm). Lettering on drawings should be of professional quality or generated by *high-resolution* computer graphics and should be large enough (10–12 points) to take a reduction of 50–60%. Drawings should be made with black India ink on tracing linen, smooth-surface white paper, or Bristol board. Graph paper if used should be ruled in blue. Grid lines that are to show in the final reproduction should be inked in black. Properly prepared glossy prints are acceptable.

Photographs should be the actual size for reproduction and labeled with letters 2 to 4 mm high. For the best reproduction, provide clear, sharp, glossy prints with adequate contrast. Providing an overlay that indicates the most critical areas of a micrograph will aid in ensuring high-quality reproduction. The best results will be obtained if authors match the contrast and density of all figures appearing on a single plate. Figures that are to appear together as one plate should be mounted on paper. Give magnifications in legends or indicate with a scale marker on photograph.

Color figures. One color plate will be published *free* of charge in each article, provided color is deemed scientifically necessary by the reviewers and the Editorial Board. Additional color figures will be charged to the author. The cost for each additional figure is $800. See the instructions above if mounting is necessary; mounted color figures *must* be submitted on paper or flexible board due to the nature of the reproduction process.

Tables should be typed double-spaced on separate pages, numbered consecutively with Arabic numerals in order of mention in the text. Each table should have a short explanatory title.

References to the literature should be cited in the text by Arabic numerals in square brackets and listed at the end of the paper in consecutive order. Abbreviations of journal titles should follow the style used in *Chemical Abstracts Service-Source Index,* 1985. Please note the style in the following examples:

1. Goldman, B., Mach, A., and Wurzel, J. (1996). Epidermal growth factor promotes a cardiomyoblastic phenotype in human fetal cardiac myocytes. *Exp. Cell Res.* **228,** 237–245.
2. Yeagle, P. L. (1993). "The Membranes of Cells," 2nd ed., Academic Press, San Diego.
3. Nieto, M. A., Patel, K., and Wilkinson, D. G. (1995). In situ hybridization analysis of chick embryos in whole mount and tissue sections. *In* "Methods in Avian Embryology" (M. Bronner-Fraser, Ed.), Academic Press, San Diego.

Proofs will be sent to the author, with a reprint order form. Authors will be charged for alterations in excess of 10% of the cost of composition.

Reprints. Fifty reprints without covers of each article will be provided free of charge. Additional reprints may be purchased.

Personal Computer Disks. Authors are encouraged to submit floppy disks with their articles once the manuscripts have been accepted and after all revisions have been incorporated onto the disk. Please label the disk with the type of computer used, the type of software and the version number, and the disk format. Clearly indicate the file names and contents of each file.

Manuscripts will be edited according to the style of the journal, and the proofs must be read carefully by the author. Please note that tabular material will be typeset conventionally. Every effort will be made to use the disk for the remainder of the article.

For further information, please contact the publisher (Editorial Supervisor, Journal Division, Academic Press, 525 B Street, Suite 1900, San Diego, California 92101-4495; telephone: (619) 699-6870; fax: (619) 699-6800).
